On a 5-6 head moulder, care should be taken when ordering hand rail knives. A measurement of the height of your “inside fence” should be taken to make sure the outside bump of the rail is not above your fence. If it is, it would need to be designed to run upside down.

RA 2, here is another hand rail you have probably seen before. This is true because it works so well in a diverse array of environments. 2 1/2 x 1 3/4 is a very standard size and easy to incorporate in blueprints.
