BA 4 is a nice classical design that starts with a slightly elongated cove leading to a .156 landing. Then a .428 bead transitions to a beautiful half tear drop followed by a final cove.

Base knives can be made in full knife sets (going all the way across the top surface), or they can be made open ended (just cutting the pattern). An open ended knife set is less expensive and more flexible, but requires more labor because the lumber must be surfaced in a separate step.
