BA 8 is another wonderful base used in many grand environments. Similar to the BA 7, it adds an addition stretched bead in the middle. A 4 1/2 width is good for transitioning into carpeted area's.

Our durable knife steel is rated for rpm's as high as 9000. Great for use on high speed moulders as well as shapers. We can even make inserts for CNC router corrugated holders. All usually in 1-2 days!
