[TOOLING](#)

BA 9 is a versatile base design that compliments many different casings. The .64 ogee steps up to a 1.052 flat before stepping up again to the top surface. The stepped flat create a nice segmented shadowing affect.

If you would like to order your knives so they can cut any width, and of course any thickness, make sure and tell us you want the knives to be "open ended". Your lumber will have to be planed first before milling the pattern.
