MC 13DF, what a great little drawer front design. It is not easy to create interest in a smaller 1 1/2" size. This one definitely catches attention. It can easily accommodate a south west design, or surprising with the right finish can look very modern and sleek as well.

We have several types of high speed steels that we make moulder and shaper knives from. Each one has its own attributes and wear values. We can provide economical short run steel as well as steel that will approach some wear values of carbide.
