MC DF4 packs a lot of uniqueness in a small 1 1/2" width package. A smaller version of its big brother MC 4, this profile starts with an enhanced beaded ogee. It then steps up to a flat before accenting the panel with an inner bead. Fantastic!

Are you running too fast or too slow. Providing there is enough horse power to accomplish the cut, you should aim for a feed speed of 30 feet per minute utilizing a 6000 rpm spindle speed. Moulding knives will provide optimum performance at this rate.
