

PANEL MOULD 27

MOULDING # TS-PA 27

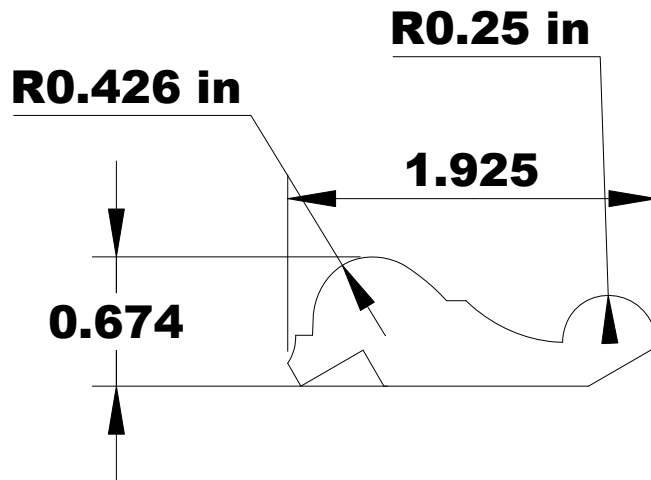

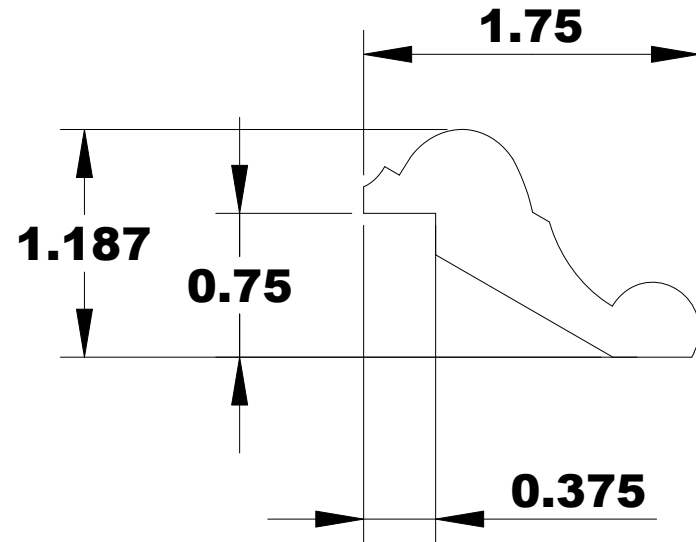

CUSTOMER: _____

COMMENTS: _____

PA 27 is one of those cool moulding ideas that really give you bang for your buck. By running flat then tipping for installation, you save on lumber cost but still get the richness of a deep profiled design. Runs from standard 4/4 lumber.

We use a great system that makes it easy to setup the knives in your head. It is called Accu-Alignment. We machine the outside edges of the steel, allowing flushing to the outside of your head in seconds.
